PRESS RELEASE

INDUSTRIALEX MANUFACTURING CORP. ADDS PAD PRINTING CAPABILITIES TO ITS SCREEN PRINTING SERVICE LINE

Arvada, Colorado (May 26, 2006): Industrialex Manufacturing Corp. (TSX-V: IXC.U), a leading provider of industrial coating services, today announced that it has completed the purchase of certain new equipment to be able to provide full-range pad printing services to its customers.

Pad printing is a printing process that employs the use of a silicon pad to place a graphic or image onto irregular, flat, or curved surfaces. With the use of pad printing there are no surface limitations. Pad printing in many applications can be a more efficient printing process than screen printing or hot stamping.

In making the announcement, Mr. Joe Triolo, Jr., Industrialex's Senior Manager stated: "With the addition of pad printing capabilities to our array of screen printing offerings, we have taken another step in providing our customers with additional complementary services. In addition, this capability will allow us to attract additional customers in our non-traditional markets such as glass, ceramics, plastics and promotional materials manufacturers. We project the regional market for pad printing to be in excess of \$2M per year."

Headquartered in Arvada, Colorado, the Company provides industrial coating services to broad range of manufacturers. The Company operates plants in Arvada and Colorado Springs, Colorado.

On behalf of the Board of Industrialex Manufacturing Corp.

"Joe Triolo, Jr."

Senior Manager
